

BOOST MAX M

A biological designed for Monocot crops

Powered by

Boost Max M is a unique consortium of biology specifically chosen for its interaction and benefit with Monocot plant species. This tailored consortium aids in root development, nutrient uptake and stress mitigation that can be encountered in the root zone of Monocot plant species. Boost Max M contains our proprietary food source to feed the biology along with the plant as well as our Root Tek technology for helping establish positive root development. The biology found in Boost Max M works to improve the soil and plant health in a way that targets the interaction of soil and plant found in Monocot crops.

By choosing biological species that work best for Monocots, Concept AgriTek can offer Boost Max M at a very attractive cost to the farmer without sacrificing quality or efficacy. Boost Max M is designed for soil application in either an in-furrow or 2x2 at 16 ounces per acre or with fertigation at a rate of 32 ounces per acre.

If you have any questions, please contact your local Concept AgriTek Dealer or District Sales Manager or contact our office and we will get you connected with the right member of our Team.
